

**SYSTEM FOR ELECTRONIC REPOSITORY OF DATA  
ENFORCING ACCESS CONTROL ON DATA RETRIEVAL**

**ABSTRACT OF THE DISCLOSURE**

When an electronic document is made available for review by other entities, it is often convenient  
5 to store the document in a repository or database managed by a third party. A system is provided  
in which the originator of the document is able to ensure the integrity and security of its document  
filed with a third party repository without having to trust the administrator of the repository.  
Both the document originator and the repository administrator have vault environments which are  
secure extensions of their respective work spaces. The vault of the document originator encrypts  
10 a document that it receives from the originator, prior to forwarding it on to the vault of the  
repository. On receipt of the encrypted document, the repository's vault signs the encrypted  
document itself before storing the document in the electronic repository and returns to the  
originator's vault proof of deposit of the encrypted document in the form of a copy of the signed  
encrypted document. An access control list identifying access ownership privileges for the  
15 document are also stored in the repository. Updates to the access control list are under the control  
of document originator, or another computer designated by the document originator. When a  
request is made to view the document, it is made from the vault of the requesting party (a secure  
extension of the requesting party's work space) to the repository's vault. The repository's vault  
retrieves a copy of the encrypted document which it forwards, along with the requestor's identity  
20 to the originator's vault. The originator's vault verifies that the access control is valid, then  
verifies that the requestor is authorized to view the document from the access control list, then  
decrypts the document and forwards the decrypted document directly to the requestor's vault.  
The requestor provides proof of receipt of the decrypted document.
